

Ordering Info:

The CaHRTenna Poseidon can be ordered from <https://www.coffeeandhamradios.com>

Description:

The CaHRTenna Poseidon is a portable vertical, designed for portable use from 40m - 6m with the use of a tuner. We suggest the use of a CMC choke at the antenna feedpoint.

It's designed as a lightweight, rugged kit that any ham will be able to assemble. You will only need basic tools that you probably already have in your shack. The antenna has been tested at 50w digital and 100w SSB.

FAQ:

Q: What is the material used for the frame?

A: HP PA 12 or Polyamide 12 Nylon, it is strong, durable, and heat-resistant.

Q: What type of wire do you use?

A: 20AWG silicone jacketed multi-strand tinned copper wire.

Q: Can I get a SO-239 version?

A: No, right now it comes with a female BNC connector. You can fit an adapter to the BNC connector if necessary.

Q: Can I just buy the frame?

A: No, right now the antenna is sold as a complete kit.
